How would you rate the effectiveness of the tasks provided in motivating students?

 Αντιγραφή

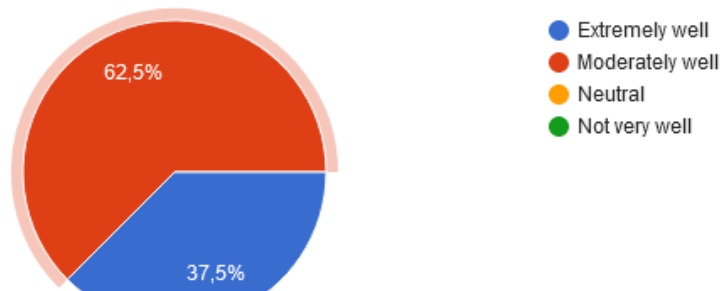

8 απαντήσεις

In your opinion, how well did the project facilitate collaboration among students?

 Αντιγραφή

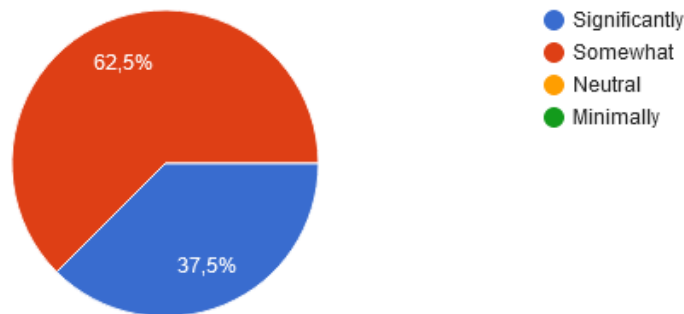

8 απαντήσεις

To what extent has your professional development as a teacher been positively impacted by participating in this project?

 Αντιγραφή

8 απαντήσεις

What challenges or problems have you encountered while implementing the project in your classroom?

8 απαντήσεις

The time to carry out the activities

Students from different classes are involved in the project. Sometimes it's harder to get them together. We carry out a large part of the activities virtually (Teams)

Learning how to deal with the IT tools I've never used before

time use

Sometimes it was difficult to encourage all students to participating in each task. There were also some technical obstacles

slow or malfunctioning twinspace, lack of time, lack of infrastructure (computers, internet connection...)

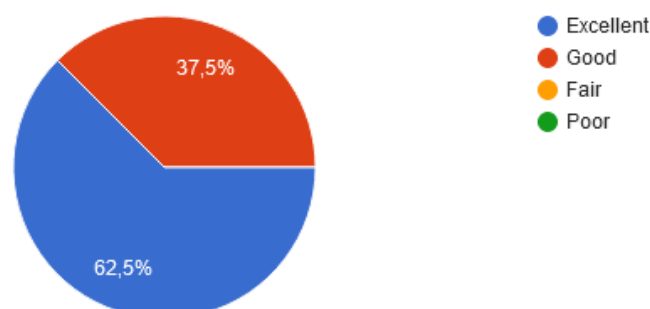

There are many activities that we do not manage to do well because they overlap with holidays in our country.

Sometimes children's enthusiasm is limited by lack of time

How would you describe the overall communication and coordination among teachers so far?

 Αντιγραφή

8 απαντήσεις

Please provide specific examples of successful strategies or activities that effectively engaged students in the learning process.

8 απαντήσεις

Work in groups in class, work in transnational teams

2. Interactive Activities: Incorporate interactive activities such as group work, role-playing, simulations, and peer tutoring.

The activity when Ss had to look for the info about other countries and when they had to describe Christmas traditions to others and the online meeting - asking and answering the questions.

The online meeting event with students from our partner countries was very enjoyable and exciting for us.

For example recording our christmas video about Polish traditions as well as singing carols. It was very attractive task which engaged all the students in learning process.

making a christmas video, setting a table with foods from their country, playing kahoot games, working in teams, online meetings with partners and communicating with them, organizing a bazaar as part of the project and taking up different roles during it

Collaboration using Teams

The opportunity they were given through the bazaar activity to make their own creations as well as how to set up the bazaar and selling and interacting with other people. they also liked creating a digital story about cyberbullying as they used the videos and the discussions that took place in parallel with the use of writing tools utilizing ICT

What suggestions do you have for improving collaboration and communication among teachers in future projects?

8 απαντήσεις

Teachers should be more responsible when they decide to participate in a project. In my opinion WhatsApp is easy and quick to communicate. Maybe encourage teachers when they participate, like "thank you", "Great/ Excellent job"...

Cooperation and communication between teachers is good.

I think there should be a deadline for each task.

We continue to educate our students and teachers collaboratively.

In my opinion, meeting online should be done between no more than 2 countries- it will improve collaboration and more pupils will be able to make his or her own speech.

maybe fewer partners

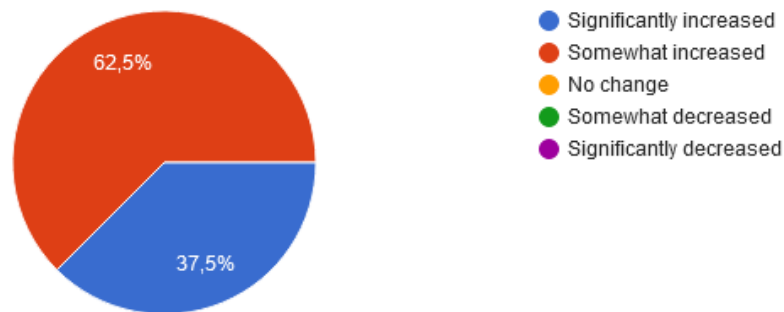

/

It is perfect !! I think that what could be done has been done

In your experience, how has the project impacted students' enthusiasm for learning?

Looking ahead, what specific recommendations do you have for the next phase of the project to ensure continued success and improvement?

8 απαντήσεις

Maybe less activities and a deadline for each activity

I think that the number of activities should be reduced and the existing ones should be finished with quality. We have holidays in many schools. In addition to this project, there are other school obligations. I suggest that the activities should not be exclusively through digital tools. Students should also write and draw, sing.

I think we are all doing things well. We have to keep doing things right.

Continuing practical training

No idea

keeping the deadlines is a must for everyone

The number of activities should be reduced and more time left for their implementation and cooperation among students.

Fewer technical problems on the platform so that our work is not difficult so that it is possible to complete the activities so that they do not accumulate and sometimes seem pressing during their execution
